

# PRESSURE

SPH4C

# MEASURING GAUGE PRESSURE

## ○ Absolute pressure

- The true pressure, or the sum of the atmospheric and gauge pressure
- $P_{\text{abs}}$

## ○ Gauge pressure

- The difference between the absolute pressure and the atmospheric pressure
- $p_g$

# FORMULA

$$P_g = P_{abs} - P_{atm}$$

$$P_{abs} = P_g + P_{atm}$$

# PASCAL'S PRINCIPLE

- Pressure applied to an enclosed liquid is transmitted equally to every part of the liquid and walls of the container

- $p_{\text{small}} = p_{\text{large}}$

$$\frac{F_{\text{small}}}{A_{\text{small}}} = \frac{F_{\text{large}}}{A_{\text{large}}}$$

Pg. 244 #5.

$$P_g = 205 \text{ kPa}$$

$$P_{\text{atm}} = 101 \text{ kPa}$$

$$P_{\text{abs}} = P_g + P_{\text{atm}}$$

$$= 205 \text{ kPa} + 101 \text{ kPa}$$

$$P_{\text{abs}} = 306 \text{ kPa}$$

Pg. 249 #4

$$F_s = 2.2 \times 10^3 \text{ N}$$
$$A_s = 0.10 \text{ m}^2$$

$$A_L = 2.0 \text{ m}^2$$

Given:  $F_s = 2.2 \times 10^3 \text{ N}$   
 $A_s = 0.10 \text{ m}^2$   
 $A_L = 2.0 \text{ m}^2$

Unknown:  $F_L$   
mass associated with  $F_L$

Steps

$$P_s = P_L$$

$$\frac{F_s}{A_s} = \frac{F_L}{A_L}$$

$$\frac{2200 \text{ N}}{0.10 \text{ m}^2} = \frac{F_L}{2.0 \text{ m}^2}$$

$$22000 \frac{\text{N}}{\text{m}^2} = \frac{F_L}{2.0 \text{ m}^2}$$

$$2.0 \text{ m}^2 \times 22000 \frac{\text{N}}{\text{m}^2} = F_L$$

$$44000 \text{ N} = F_L$$

$$1 \text{ N} = 1 \text{ kg} \frac{\text{m}}{\text{s}^2}$$

$$9.8 \frac{\text{m}}{\text{s}^2}$$

$$b) F = mg$$

$$44000 \text{ N} = m \left( 9.8 \frac{\text{m}}{\text{s}^2} \right)$$

$$44000 \text{ kg} \frac{\text{m}}{\text{s}^2} = m \left( 9.8 \frac{\text{m}}{\text{s}^2} \right)$$

$$\frac{44000 \text{ kg} \frac{\text{m}}{\text{s}^2}}{9.8 \frac{\text{m}}{\text{s}^2}} = m$$

$$9.8 \frac{\text{m}}{\text{s}^2}$$

$$m = 4490 \text{ kg}$$
